LWF offers small grants to help offset transportation costs and/or entrance fees associated with water-related field trips. Eligible excursions may include:

- World Water Day activities (March 22)
- Visits to Oak Hammock Marsh, FortWhyte Alive or the Manitoba Museum’s Lake Winnipeg: Shared Solutions exhibit
- Participation in the Lake Winnipeg Research Consortium’s Lake Ecology Field Program onboard the research ship, the M.V. Namao

Field trip grants of up to $300 are offered on a cost-shared basis (50% school, 50% LWF) to a maximum of $150 per trip for transportation and/or up to $5 per student for entry fees. Funding is limited to one grant per school per year and is dependent on LWF resources.

LWF offers free in-class presentations that provide age-appropriate information about:

- Lake Winnipeg and its current health challenges (algae blooms, zebra mussels)
- An overview of LWF’s eight-point plan to translate science into action
- Practical tips for how citizens can get involved in solutions

Currently we offer presentations in Winnipeg and nearby communities. Due to high demand and limited capacity, advance booking is strongly encouraged.

More information and application forms are available at lakewinnipegfoundation.org. Look for the “For teachers” section under “Resources.”
Since 2005, LWF has been working to improve the health of our shared waters by translating scientific expertise into accessible, action-oriented public education. We are happy to partner with individual teachers and/or local schools in the collaborative development of additional educational opportunities – providing customized tools, resources and other supports that can be integrated into existing curriculum to encourage water stewardship learning outcomes via multiple points of contact throughout the school year.

**Opportunities include:**

- Assistance with water-related projects in science, social studies, world issues, art, writing, technology and more
- Tools for community cleanups
- Practical water conservation tips
- Ideas for schoolwide challenges
- Promotion of student philanthropy efforts and/or school fundraising events in support of LWF
- Connections with local experts
- Activities to engage parents and community members
- Participation in community-based monitoring (CBM) water sampling fieldwork
- Guidance with student advocacy efforts (letters to decision-makers, local media)
- Digital and social media collaboration

We aim to be responsive to educators’ needs and provide students with opportunities to make a difference.

**Interested in partnering with LWF?**
